DATA SCIENTIST

EDUCATION

Wake Forest University School of Business | Master of Science in Business Analytics | May 2026

Relevant Coursework: Machine Learning, Data Management, Operations and Supply Chain Analytics, Financial Analytics, and Risk Management, Data-Driven Storytelling for Impact

Saint Leo University | Bachelor of Science in Computer Science | May 2022 | GPA: 3.93

Relevant Coursework: SQL & Database Management, Artificial Intelligence, Data Structures, Software Development

AREAS OF EXPERTISE

Machine Learning & Predictive Modeling | Statistical Analysis | Feature Engineering | Model Evaluation | Reporting | Problem Framing
Software Engineering | Data Engineering | Data Cleaning | Data Transformation | Cross-Validation | A/B Testing | Anomaly Detection
Technical Documentation | Fraud Modeling | Risk Assessment | Stakeholder Communication | Data Visualization | Analytical Research
Cross-Functional Collaboration | Business Process Improvement | Requirements Gathering | Workflow Automation | Application Testing

TECHNICAL SKILLS

Languages & Libraries: Python (Pandas, NumPy, Scikit-learn), SQL (Snowflake, PostgreSQL, MySQL)

Predictive Modeling & Statistical Analysis: Logistic Regression, Random Forest, XGBoost, LightGBM, Decision Trees, KNN, Time Series (ARIMA), Clustering (K-Means, Hierarchical), Feature Engineering, Anomaly Detection

Model Evaluation & Interpretability: Cross-Validation, ROC-AUC, Precision-Recall, Log Loss, Calibration, Permutation Importance

ML & Pipeline Development: MLflow, FastAPI, Streamlit, Render, Git/GitHub

Data Platforms & Cloud: Databricks, Snowflake, AWS, Azure

Data Analysis & Reporting: Excel, Power BI (DAX, Power Query), Tableau, Looker, Streamlit

Collaboration & Dev Tools: Jira, Confluence, VS Code

RELEVANT PROFESSIONAL EXPERIENCE

GRADUATE CONSULTANT / DATA SCIENTIST | USAA

Oct 2025 – Present

- Led a five-person consulting team in designing an account takeover detection solution by analyzing 100K+ customer profiles and 5K confirmed fraud cases to identify behavioral risk patterns
- Defined fraud detection criteria from scratch, independently determining suspicious behavioral indicators across a 72-hour prediction window after evaluating and comparing competing ML model performance tradeoffs
- Engineered 41 features across recency, burst activity, and behavioral velocity patterns, achieving AUC-ROC of 0.9135 with the top 20% of scored events capturing 91.1% of all confirmed fraud cases
- Built and deployed a live Streamlit application in Snowflake for real-time ATO risk scoring, generating plain-language explanations for every flagged account to support faster, explainable investigator decisions

IT TECHNICIAN | Lutheran Services Florida

Mar 2023 – May 2025

- Designed and deployed an automated device provisioning system across 90+ locations in Florida using Intune, eliminating manual setup across hundreds of devices, and cutting setup time by 85%
- Collaborated with operational leaders to assess process readiness, document adoption risks, and coordinate smooth system transitions with minimal disruption to day-to-day workflows

PROFESSIONAL PROJECTS

Fraud Detection – Deacon Financial Services (Python, SQL, LightGBM, Random Forest, Logistic Regression, Stakeholder Alignment)

- Developed LightGBM, Random Forest, and Logistic Regression models across nearly 1M records to address a 12% application fraud rate and \$12.8M in projected losses, delivering a risk governance framework that aligned leadership on detection thresholds and deployment strategy

Enterprise Fraud Analytics Pipeline (Python, SQL, Snowflake, Scikit-learn, Logistic Regression)

- Engineered a fraud classification pipeline in Snowflake across 1M+ financial records, consolidating fragmented data sources into an analysis-ready dataset and building supervised ML models to surface actionable insights for operations and risk teams

NovaSend Fulfillment Risk ML Pipeline (Python, Databricks, MLflow, FastAPI, XGBoost, LightGBM, Streamlit)

- Built a full MLOps pipeline on 180K supply chain records using Databricks and MLflow across 6 experiments, deploying a tuned XGBoost classifier via FastAPI and a live Streamlit dashboard with real-time risk queues and drift monitoring

ML Modeling Agent (Claude API, React, Vite, Vitest, Vercel, Prompt Engineering)

- Built an Agentic AI application powered by the Claude API that guides users through a 7-stage supervised ML workflow across 8 model families, serving as an interactive modeling partner for navigating model selection and evaluation decisions

LEADERSHIP AND INTERESTS

NATIONAL SOCCER TEAM | Dominica National Team

- Represented Dominica at the international level as a competitive soccer player, competing in World Cup qualifiers and friendly matches at both the Youth and Senior national team levels
